Agar Product's Environmental Credentials Chart

NOTES;

1. Non-toxic Class 6 means that the product is not classified as Dangerous Goods Class 6. The product may or may not be classified as hazardous according to Worksafe Australia criteria. Check the Material Safety Data Sheet.
2. Septic Safe means that the spent product, after being used as directed in normal circumstances, will not compromise the operation of a typical septic system. However to ensure that the beneficial bacteria in the septic system are not affected, we recommend that for daily use only pH-neutral products be used, that only one other chemical be used once per week, and that all products be diluted to the lowest concentration that is suggested on the label. Disinfectants, anti-septic hand-wash and peroxy bleaches should not be used when the waste-water runs into a septic system.
