VIRATTACK	Hospital Grade	Hydrogen Peroxide			✓				

Note 1: *Because food residues or soil can weaken the effect of the sanitiser, it is necessary to clean the surface first with a detergent, then rinse with potable water, and then apply sanitiser to kill any germs.*
Note 2: *A combination detergent and sanitiser can both clean the surface and kill germs. On food-contact surfaces, it MUST be rinsed off well after use (except Single Step).*
Note 3: *Select the product by choosing the fragrance you want. Orchids has a stronger cleaning action. Perfumed products should NOT be used in food-processing applications where the fragrance could potentially taint the food.*
Note 4: *GECA is Good Environmental Choice Australia. Kuranda is licensed to GECA standards verifying reduced environmental impact.*
Note 5: *QAC is Quaternary Ammonium Compound*
